Office Action Summary

Application No.

09/742,675

Applicant(s)

STOCKS ET AL.

Examiner

Sean R. McGarry

Art Unit

1635

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 March 2005.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-14 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-14 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/15/05 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 remain rejected under 35 U.S.C. 102(b) as being anticipated by Agrawal et al [WO 94/01550].

Agrawal et al discloses antisense oligonucleotides that are “self stabilized”. Agrawal et al disclose antisense that have a first region and a second region that bind a target sequence wherein the first region is available for binding while the second region is temporarily “masked” (See page 5, lines 13-25, for example). On page 7 and in Figures 1, 2, 5, and 6, for example it is disclosed the “masking through a hairpin structure. The above Figures and the above cites also disclose that a first region (hybridizing region) is complementary to a target sequence and is in single stranded

Art Unit: 1635

form and at least Figure 1 shows that the first region is within the region of 3-18 bases in length (See also pages 9-10 which discloses a preferred range of 8-50 nucleotides in length for the hybridization target region/first region). Figure 7 show a ribozyme, targeted to HIV gag mRNA, with a hairpin region. The ribozyme has a "first" region, the 5' hybridizing arm, which is available for hybridization. Since the "first" region is 10 nucleotides in length it is "insufficiently long to provide stable binding by itself", as per applicants disclosure page 9, lines 3-5. It is noted that since the region is 10 nucleotides in length, the region of Agrawals' ribozyme would appear to be of an advantageous length. The second region, the 3' hybridizing arm, is temporarily masked in the absence of a target. It is noted that the 3' hybridizing region, the second region of the instant invention, contains a 3' portion that makes a hairpin structure and this is a non-target region (ie is not the HIV gag mRNA), however, it is complementary to the "second region" of the molecule, for example. Further, at least Figure 1 discloses that the self-complementary region/second region is complementary to a sequence of the target sequence that is contiguous with that targeted by a first region/hybridizations region. It has been taught that the self-stabilized oligonucleotides can target single stranded and double stranded targets, for example (see page 10, for example). At least at pages 8 and 16 it is disclosed that the self-stabilized oligonucleotides can be composed of RNA, DNA, or combinations thereof, for example. The inhibition of expression of target sequences is disclosed at pages 9-13, for example. It is noted that at page 9 of Agrawal et al it is disclosed that the "disruption and replacement of base-pairing takes place because the intermolecular base-paired structure formed by the hybrid between the

Art Unit: 1635

target nucleic acid sequence and the target hybridization region is more thermodynamically stable than the intra-molecular base-paired structure formed by the self-complementary oligonucleotide." The instant specification asserts at page 7, in its broad definition of "stabilizing elements", that the aim of the elements is to render the second region/target hybrid more stable than the second region in its masked state. Since Agrawal et al have disclosed this characteristic in the self-stabilized oligonucleotide these oligonucleotides, without evidence to the contrary, inherently contain some destabilizing element. The ribozyme of figure 7, for example clearly targets a first and second sequence that are contiguous or closely juxtaposed. A look at Figure 7 shows the target sequence contains at least a first region and second region closely juxtaposed.

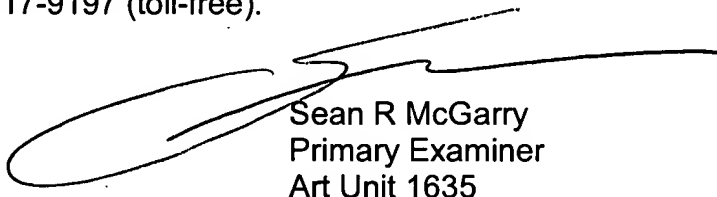

Applicant's arguments filed 3/25/05 have been fully considered but they are not persuasive. Applicant argues that the claimed invention is defined over the prior art since the prior art fails to show a compound that targets a target that comprises a first gene sequence and a second gene sequence that are contiguous or closely juxtaposed. This argument is not agreed with as shown in the rejection above. Figure 7 of the prior art of record clearly shows that the art relied upon does indeed disclose such regions being targeted by the ribozyme of Figure 7, for example.
